Pool Closing

1. CLEANING THE POOL

Brush and vacuum the pool to remove any dirt, leaves, or debris.

2. BALANCING THE WATER

Have your water tested at Marie's Pool Store to ensure proper water balance all winter.

Add a double dose of shock and one quart of algacide to pool .

Let the pump run for at least 4-8 hours.

3. WINTERIZING THE EQUIPMENT

Lower the water level in the pool to below the skimmer opening.

Remove all drain plugs from the pool equipment (pumps, filter, chlorinator, heater).

Remove pressure gauge from filter valve.

Plug all return lines, and place a "gizzmo" into the skimmer.

4. COVERING THE INGROUND POOL

Lay the pool cover on one side of the pool deck.

Place water tubes end-to-end on the cover with the caps facing upward.

Fill the water tubes 3/4 full with tap water.

Carefully pull the cover across the pool, draped loosely and tucked in place flat against the pool walls and the surface of the water.

Place remaining water tubes on the cover end-to-end.

5. COVERING THE ABOVE GROUND POOL

Spread cover over pool, resting flat on surface of water and edges over the rails.

Weave cable through grommets in cover and tighten cable around pool with turnbuckle.

Secure in place with "quick clips" placed 3 per wall section around pool.
